

On the web at www.soles2dance.com, customer support at: customerservice@soles2dance.com
Thank you for choosing a Soles2dance product. Here are instructions on how to work with **SUEDE-DIY** sheets.

I. Instructions

While there are many uses for this product, most of our customers use our sheets to craft suede soles for their dance shoes. Accordingly, these instructions are written with reference to dance shoes but can also be applied to other uses.

1. Rigorously clean the soles of your existing shoes with a steel or wire brush.
2. Place the sole of your shoe on the brown, 3M-branded liner of the suede sheet and trace the contour of that sole on the liner with a marker.
3. Use a pair of good household scissors or a utility knife to cut out the soles as marked.
4. Separate the liner from the suede at one end of the sole you cut out in Step 3.
5. Ever so lightly stick the exposed adhesive to the shoe sole. Once the adhesive touches the shoe sole lightly, orient the remainder of the stick-on sole so that it is aligned with the shoe sole. Then push down on the lightly sticking corner of the suede sole to attach it securely to the shoe sole.
6. Slowly and carefully peel back more of the liner, while simultaneously rolling the stick-on sole onto the shoe sole. Do this at the same rate, at which the adhesive is revealed as you peel back the liner.
7. Repeat Steps 1-6 for the heels if your dance shoes are flat shoes, not high-heeled shoes.
8. After attaching your suede soles to your shoes, put the shoes on and stand or cautiously walk in them for a few minutes. Also, stand still and shift your weight around so that all areas of your suede soles bear most of your weight, at least for a few seconds. Don't skip this step: the 3M adhesive is pressure sensitive and will create a better bond under high pressure. For ladies' high-heeled shoes, it is not customary, necessary, or recommended to stick suede under the small contact area of the tip of the high heel. If you insist on putting suede there, we recommend using Superglue or contact cement to stick suede to that small contact area.

II. Usage Recommendations

This section offers some useful tips that will help you make the most of your SUEDE-DIY product. We assume that you already successfully affixed your stick-on suede patches to your shoes.

1. Bear in mind that suede soles work well only on well-maintained, studio-quality hardwood floors. Suede soles are terrible on pretty much all other floors, especially those of nightclubs or dance clubs where spilled drinks make the floor sticky.
2. Under no circumstances should you use suede soles on abrasive surfaces such as concrete or asphalt – these surfaces will literally shred your suede soles within minutes. Instead, use our super-low-friction stick-on sole SULOFRI, also available at www.soles2dance.com
3. After dancing, use a wire brush to remove dirt from your suede soles. Be careful near the edges of the stick-on soles: vigorous brushing can detach the stick-on sole from the dance shoe.
4. **If your suede soles partially detach during use,** you can glue them back on with Superglue, available at all hardware stores. Beware that any part of the stick-on sole that is super-glued to the shoe sole will bond permanently, that is, you may or may not be able to remove the stick-on sole at a later time, even if you try to peel it off forcefully.

Instruction on video: One of our customers made an awesome instructional YouTube video about how to apply this product. To watch, enter "Soles2dance" in the YouTube search box and click on the first video clip offered in response to that search. We thank *Lindystyle Oneohone* for this great clip!

Soles2dance ironclad guarantee:

If this product does not meet your expectations, please contact us at customerservice@soles2dance.com – we will promptly rectify any problem to your complete satisfaction.

Guaranteed!
